Extractiva adds Unicode international language support to e-discovery suite

October 9, 2007, Herndon, VA – For Immediate Release: Extractiva, Inc., the pioneer in integrated Electronic Data Discovery software, announced today that Unicode international language support will be included in the latest version of the e-discovery production suite, HardCopy Pro Plus™.

Version 6.00W of HardCopy Pro Plus now allows users to extract full text, metadata and create images in TIFF or PDF format from a variety of data sources in hundreds of different foreign languages, including Korean, Japanese, Chinese, Russian, Arabic, and many others. E-discovery productions are increasingly global in scope and require the ability to index and search data from a variety of international sources.

As the first scalable enterprise e-discovery processing tool with full Unicode compliance, HardCopy Pro Plus sets a new standard for litigation support applications. “Our client base has increased over the past two years to include law firms and consulting firms around the world, including Singapore, Tokyo, and Dubai,” said Dale Rychert, Enterprise Systems Analyst. “The scope of large civil litigation seems to be growing more global each and every day.”

About Extractiva

Extractiva, Inc. sells and supports the HardCopy Pro Plus™ professional-grade electronic data discovery solution used by large litigation-support service bureaus and law firms. HardCopy Pro Plus is used in conjunction with retrieval systems to make large batches of electronic documents and e-mails easily accessible to attorneys and paralegals for searching and review.

Extractiva focuses on helping clients convert from ad-hoc, labor-intensive methods to more automated methods, and continually works with EDD experts to develop pioneering and evolving solutions in the evolving EDD field. The company, located in Herndon, Virginia, was founded in 2000 and was formerly Mobious Solutions, Inc. For more information, visit <http://www.extractiva.com>.
